Case Study:

Functional Requirements:

Teachers

So, according to the case study. The portal should provide access to the teachers for their profession related material. The teacher must be able to upload study materials, they should be able to assign marks to the students quizzes and assignments. They must have access to the timetable that is assigned by the management system.

Students

The students must be able to check their attendance. They should be able to check their marks for both their assignments and quizzes. They should be able to track their current position in the semester that they are in at the moment. Fee status and scholarship status should be available for the students.

Parents

Parents should be able to track their son's or daughter's performance.

Non-Functional Requirements:

Non-functional requirements include smooth access to the portal. No long loading times which is very frustrating for all of us. The online portal should have a pleasant theme. It should have eye catching fonts and colors for good experience. That's all I think.
